Road Needs Study

Addenda #1 September 18, 2024

# This addenda is to address some questions the Township of Joly has received regarding the Road Needs Study.

1. Is the quotation limited to roads or are the municipal bridges to be inspected as part of the assignment?

The Township has completed bridge inspections this year. Just the roads are part of this study.

2. Does the Township have any recent applicable traffic volume data for the roads or are updated traffic counts required as part of the scope of work?

At this time the Township does not have up to date traffic count. The Township is actively working on obtaining traffic count information. This data will be available upon completion for the successful consultant.

3. Will the Township's Working Road Foreman be providing a vehicle and leading the inspections?

Yes, the Working Road Foreman will be available to use the Public works vehicle to escort, lead and answer any questions.

4. Does the Township have a digital database (Excel or GIS or both) of roads with pertinent road data (from, to, length, surface type, width, etc.) already populated?

The Township uses CGIS. It only shows culverts, signs and roads, it does not show road width or types of material on the surface.

The Township does not have an auto population excel sheet with road data. Joly has 3.1 kilometers of DST with a micro seal on top of it, the rest of Joly roads are gravel.

5. Has a road needs study been completed in July in the recent past?  
Would a copy of any previous studies be made available to the successful consultant?

The last Road Needs Study the Township completed was in 2013. This study can be provided.

6. Does the Township require any digital (GIS) mapping to be provided in support of the study?

The Township does not require GIS mapping to be provided.
